Automated Cargo Planning Software

by Ali Khoramshahi

What Is Cargo Planning Software?

- An application to manage the internal spaces cargo carrier

- Could be internal or external logistic

- Optimize the space for the best planning

- Easy to use and modify the result planning
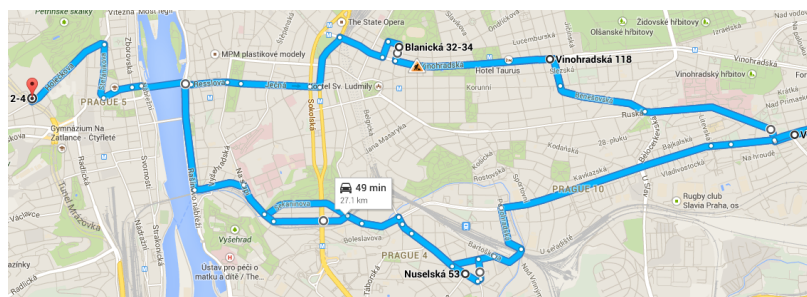

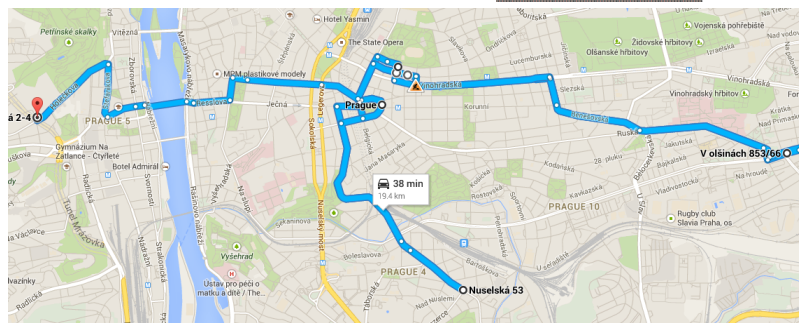

Good Cargo Planning Software

-To have the same limitation as reality

- Easy to use

- Ability to be implemented on different environment

- Fast and Efficient

- Ability to reduce the cost for the company

Example:

MaxLoad®Pro

Rout Optimizer Software

- Connected to maps and locations

- Ability to work with cargo planning software

- Ability to connect into motion sensors such as GPS

- Ability to reduce the cost for the company

Future Of the software

- Ability to extend into large scale shipping company

- Ability to work with already designed data bases

- Ability to be implemented on different environment

- And in the far future to automat the whole procedure

Thanks for your attention.
